

std::runtime\_error

```
classDiagram
    ClassFormatError --|> std::runtime_error
```

The diagram illustrates an inheritance relationship. At the bottom is the 'ClassFormatError' class, which has a public constructor '+ ClassFormatError()'. Above it is the 'std::runtime\_error' class. A blue arrow with an open triangular head points from 'ClassFormatError' to 'std::runtime\_error', indicating that 'ClassFormatError' inherits from 'std::runtime\_error'. The 'std::runtime\_error' class is shown with two empty compartments below its name. The 'ClassFormatError' class is shown with two empty compartments below its name and above its constructor.

ClassFormatError

+ ClassFormatError()
