

std::runtime_error

```
classDiagram
    ClassFormatError --|> std::runtime_error
```

The diagram illustrates an inheritance relationship. At the bottom is the 'ClassFormatError' class, which has a public constructor '+ ClassFormatError()'. At the top is the 'std::runtime_error' class. A blue arrow with an open triangular head points from 'ClassFormatError' to 'std::runtime_error', indicating that 'ClassFormatError' inherits from 'std::runtime_error'. The 'std::runtime_error' class is shown with two empty compartments below its name, while 'ClassFormatError' has two compartments, one of which contains the constructor signature.

ClassFormatError

+ ClassFormatError()
